

DHIYA'ULHAQ PUTRI KINANTY

6281280583884 | putriulhaq0609@gmail.com | www.linkedin.com/in/dhiyaulhaqputrikinanty | https://github.com/putriulhaq

With 4 years of experience in software development, specializing in backend development and operations. Skilled in Python, Node.js, and PHP, and always eager to learn and grow in building scalable and efficient systems.

Work Experiences

Bridestory - Jakarta, Indonesia Nov 2025 - Present

Backend Engineer

- Migrated backend services from PHP (Laravel) to Python to improve scalability and performance
- Developed and integrated systems, including migrating the payment system to use Tokopedia OpenAPI (special-case implementation)
- Optimized user data fetching performance, reducing response time from 30s to 1s by implementing a conditional query strategy (UNION for filtered queries, JOIN for unfiltered) to avoid unnecessary query overhead
- Designed and developed a WhatsApp Flow interaction for RSVP functionality, collaborating closely with the product team on requirements and user experience
- Maintained existing systems, performed debugging, and resolved production issues
- Designed and developed new features to enhance platform functionality
- Currently building an AI-driven automation using n8n to monitor server performance (CPU, disk, and utilization metrics) with real-time alerts integrated into Slack (ongoing)

Neo Karya International - Jakarta, Indonesia Mar 2025 - Nov 2025

Backend Developer

- Designed and developed dynamic company profile website with CMS using Python Flask, ensuring scalability and flexible content management
- Implemented Python-based data mapping logic, reducing redundancy by 63% and improving cross-system data consistency
- Integrated IVRS with multiplatform web application using Asterisk PBX, enabling automated and scalable voice call workflows
- Developed IVRS workflows supporting real-time task generation, dynamic scheduling, and comprehensive call status tracking

PT Beomho Teknologi Service - Jakarta, Indonesia Jul 2022 - Sep 2024

Backend Developer

- Developed multiple monitoring systems (traffic, animal, worker, facility, IoT), improving operational visibility and centralized management
- Built RESTful APIs using Python Flask, enabling seamless integration with JavaScript-based front-end applications
- Implemented real-time location tracking using OpenLayers, enhancing live site monitoring across all deployed systems
- Integrated GIS servers for worker monitoring, delivering accurate location-based services and custom map visualizations
- Managed CI/CD pipelines with Jenkins and Docker, ensuring consistent, automated, and reliable deployment environments
- Researched and implemented ELK Stack, improving analytics and visualization for traffic and IoT sensor data
- Provided post-launch debugging and maintenance, ensuring system stability and minimizing downtime across projects
- Built and configured Linux servers (CentOS) from scratch, supporting reliable and scalable production environments
- Optimized SQL queries by 83%, reducing load time from 30s to 5s via efficient monitoring integration
- Integrated Ant Media Server with WebRTC, enabling scalable real-time video streaming capabilities
- Collaborated with multinational teams, delivering technical solutions and ensuring alignment with project requirements

Education Level

University Al-Azhar Indonesia - Jakarta, Indonesia Sep 2023 - Jan 2025

Bachelor of Informatics, 3.64/4.00

IPB University - Bogor, Jawa Barat May 2019 - Jun 2022

Diploma in Management Informatics, 3.48/4.00

- Took part in the PKM-KC national competition as a representative of the IPB vocational school with the title "BACA = Keranjang Pintar".

Skills, Achievements & Other Experience

- **Achievements** 🏆 (2023): Received a scholarship for the Sparta Coding Bootcamp based in Korea with a role as a FullStack developer.
- **Hard Skills:** Python, Flask, OpenGL, PHP, Jenkins, NodeJs, ExpressJs, ReactJs, Linux, JavaScript, Docker, Oracle, Postgresql, Postman, Git, AWS, GCP
